

Count on it.

ProCore® 648s

5 Things to Know:

1 AT YOUR FINGERTIPS

The redesigned operator console on the ProCore 648s puts all primary controls at the operator's fingertips. The intuitive design and layout allows single-hand operation while walking in the direction of travel from either side of the machine.

2 DELAYED MODE

Operating in Delayed Mode unlocks the full potential of the exciting technology on the ProCore 648s, including easily viewing and targeting coring head drop and raise and improving drop performance. When utilizing Immediate Mode, the machine operates as the current model does.

3 IMPROVED PERFORMANCE AND PRODUCTIVITY

Operating in Delayed Mode improves turf conditions at coring head drop. An electronically-controlled hydrostatic drive ensures consistent hole spacing, uphill or downhill. A tighter turning radius with reduced front wheel push and scrub during turn around improves productivity and reduces turf damage.

5 COMPATIBLE ACCESSORIES

All ProCore 648 tine blocks, turf guards or other accessories a customer may own will mount onto the ProCore 648s, reducing the cost to upgrade.

4 PROVEN DESIGN

The revolutionary RotaLink coring head design, True Core ground following system and series parallel 3WD continue to provide smooth operation, superior hole quality, consistent depth and unrivaled productivity.
